

**DUTY OPERATOR
ON OPHIR CAMP****Ophir Tunnel Man Enthusiastic
Over Conditions.****BUCKHORN'S GREAT SHOWING
WALKED FOR 100 FEET INTO
SOLID ORE.**

With a wisdom born of experience in the business, Richard Schell, a mining operator and business man of Duluth, Minn., has just completed an examination of the Ophir Tunnel company's property and workings, at Ophir. Mr. Schell came out to size up the proposition because he had already put some money into it and was inclined to go deeper into his own pocket, and at the same time give friends and associates his views on the merits of the proposition.

Having been interested in the iron and copper mining business all his life, with interests in Minnesota, Montana and Arizona, Mr. Schell's judgment, knowledge of formation, ore occurrence and the business possibilities of mining enterprises and weight to his utterances. For these reasons his opinion of the camp of Ophir and its mines will be of exceeding interest, not only to the stockholders of the Ophir tunnel enterprise, but to the mining world in general.

"I have spent the better part of a week at camp," Mr. Schell yesterday, "and I am pleased to say that my doubts which I might previously have entertained concerning the value of the Ophir tunnel enterprise have been entirely removed by my investigations. I leave firm in the conviction that the company has the key which is bound to unlock the gateway and reveal the wealth of the lodes of this district, as could no other undertaking."

Sizes Up Buckhorn.

"Through the courtesy of Manager S. M. Levy and other officials of the Buckhorn company I was permitted to make a thorough inspection of the workings and note the character of the ore and various veins now being mined in that property. This inspection, together with a study of the surface and geological structure of the district, has left no doubt in my mind that the 500 acres of ground belonging to the Ophir Tunnel company could not have been better located. The projected course of the tunnel, which is already in a distance of about 600 feet, is ideal. It is following the main contact of the district and will, before it has been extended 2,000 of the 7,000 feet it must go to reach the limits of the company's territory, cut or intersect a ledge of the six cross-fissures. Four or five of these fissures are now being explored and mined in the Buckhorn company's bonanza in the west. They all run into Ophir Tunnel ground and, with the great additional depth that will be obtained, we should find a tremendously large body of ore. Assurance in this respect is made doubly sure because the tunnel is being driven in the contact and the matter of history in every district where cross-fissures are cut at intervals by cross-fissures, that the greatest bodies of ore occur at or near the bodies of ore. The first fissure (the Fiske) should be struck in the tunnel within the next 200 feet, basing calculations on the dip of the vein, as exposed in the old workings from which a great deal of money was taken, according to report, in the early days. After leaving this point, the tunnel is posted, and from there on veins of splendid strength and richness will be cut with increasing frequency. There is no doubt, therefore, that the portion is made as plain as day in the four separate tunnel workings of the Buckhorn, which is now a bonanza mine."

Walked 100 Feet Through Ore.

"In going through that property with Manager Levy I began in the first or upper tunnel. From that we passed down through to the others and took in the various ledges and veins and in them as we went. The amount of ore exposed was really astounding. On the lower tunnel level I walked for over 100 feet through a solid body of galena ore which was exposed in top, bottom and sides of the drift. The full face of it in front and nothing to indicate where the limits might be. It was a sight good for sore eyes and, when I stopped to consider that the body of ore was reached by the Ophir tunnel without a doubt, I no longer had any misgivings."

Possibilities of Camp Weighed.

Mr. Schell looked into every feature of the camp's possibilities during his visit, and reached the conclusion that with such splendid mines as the Buckhorn and Senator W. A. Clark's Ophir Hill bonanza districts, the boundary lines of the Ophir Tunnel company's ground, where a 300-ton mill is daily pounding away, where electric power and light is enjoyed, and where the prospect of a branch line from the San Pedro being built into the camp from the main line during the coming season, he was compelled to draw the conclusion that Ophir was one of the best camps in the country to tie to.

"I believe," said he, at parting, "that Ophir is destined to become one of the greatest producing camps in your state and, without desiring to detract a particle from the value of other properties, I am convinced that the Ophir Tunnel company will develop greater bodies of ore than half of the great mines of the state can boast, within the next few years. The opening of these bodies will commence in a few months and will be repeated at intervals of every few hundred feet, until the bulk of the company's property, 7,000 feet long and at a depth of 500 to 2,000 feet, has been reached."

Utah Stocks in Boston.

James A. Pollock & Co., bankers and brokers, yesterday received over their private wire from the Boston market, one of their Boston correspondents, the following copper and silver stocks in the Boston market, with range and closing quotations:

Boston, Dec. 31.—The market has had a considerable rise for the last two weeks and this break of yesterday and today seems to be largely accounted for by an evening up of contracts before the two day's holiday.
